DETAILED ACTION

Claim Rejections - 35 USC § 112

Claim 16 is rejected under 35 U.S.C. **112**, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The phrases "the mounting plates", in line 2, and "the headed studs", in line 4, lack antecedent basis and therefore render the claim as vague and indefinite

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims are rejected under 35 U.S.C. **102(b)** as being anticipated by ***Johnson 3,344,779***.

Johnson sets forth a rack comprising a rectangular support (inclusive of members 28 and 29); and a rectangular shield 17 capable of being mounted to a vertical surface; wherein the support is adapted to be mountable to the shield; and the method of storing.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims are rejected under 35 U.S.C. ***103(a)*** as being unpatentable over ***Johnson in view of Colbridge 3,794,183.***

Johnson sets forth the rack and method, as advanced above, except for the keyholes and headed studs. However, Colbridge teaches the use of keyholes and headed studs within a rack system. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the rack of Johnson by incorporating keyholes and headed studs, as taught by Colbridge, in order to more securely removably attach the shield to the support.
